

TE-BXC30

BI-AXIAL GEOGRID COMPOSITE

Titan's TE-BXC is a composite made of bi-axial polypropylene (PP) geogrid, heat bonded to a long fiber non-woven polyester geotextile that acts as a filter and soil separator. This geogrid is manufactured using a punching and drawing process whereby the polypropylene sheet is stretched in two directions, machine (longitudinal) and cross-machine (transverse). The result is a monolithic and isotropic geogrid with thick and wide ribs, thick integral nodes, and uniform square apertures. Engineered to be mechanically and chemically stable in aggressive soil environments, TE-BXC allows sub-base drainage to help maintain structural stability, and is very effective in keeping expensive imported material from being contaminated by migration of fines from the saturated base soils.

 (2) Average
 (3) Junction efficiency is defined as junction strength divided by multi-rib strength
 (4) Resistance to in plane rotational movement measured at an applied momen = 2m-N (20kg-cm) in accordance with US Army Corps of Engineers methodology for the measurement of Torsional rigidity
 (5) Aperture tolerance: within +/- 10% coefficient of variance
 (6) Custom length orders can be accommodated.
